

To all personnel

Geoservices
Corporate Ethics & Social Responsibility Statement

Geoservices is a leading oil & gas service company providing data acquisition, monitoring, diagnostics and the associated expertise and support to the petroleum industry.

Our primary task is to make profits and to add value by providing products and services that respond to the aspiration and levels of satisfaction expressed by our clients and other interested parties. However, these essentially economically driven goals do not prevent us from promoting sustainable organisational policies which reflect our social and business responsibilities.

Health & Safety, Environment, Quality and legal aspects are all integral parts of our management systems but we believe that ethical and social responsibilities go beyond statutory obligations and provide a foundation for developing mutually advantageous environments.

Geoservices Top Management is committed to contributing positively to realistic actions for environmental and social sustainability - in line with the spirit of acknowledged ethical, anti-corruption and universal standards (e.g. UN Global Compact or CSR SA 8000, standards designed to prevent exploitation of people, use of child, forced or compulsory labour, etc). Our codes of conduct are routinely incorporated into our training and personal awareness plans. They are intended to ensure that risk and adverse nuisance is minimised.

Management and supervisors at all levels are encouraged, for continual performance improvement, to develop these value-added processes by involving and motivating all staff to assume both corporate and individual responsibility within their activities. We encourage our staff, suppliers and subcontractors to remain responsive to operational and market situations through the effective use of resources (people and assets) combined with a proactive respect of standards to prevent exploitation of people and the use of child, forced or compulsory labour.

Through teamwork, the application and respect of these objectives and our Quality, Safety and Environmental Protection Policies we will apply the highest practical standards and promote continual improvement throughout Geoservices.
